WATCH BREAKER · MOVEMENT ID · SAMPLE

What a $49 Movement ID looks like

WB-0007 · a worked example from our own bench · an Omega calibre 565 in a 168.0022 case

Every line below is graded by how it is known and cited to the catalogue it comes from. Nothing here is invented.

THE MOVEMENT

Omega calibre 565 · 27.90 RA SC PC CAL CORR AM · 24 pierres

Diameter	**27.90 mm**	FACTORY SHEET
Height	**5.00 mm**	FACTORY SHEET
Beat	**19,800 A/h**	FACTORY SHEET
Jewels	**24**	FACTORY SHEET
Calibre marked on	**the bridge**	FACTORY SHEET
Introduced	**1966**	FACTORY SHEET
Built on	**calibre 563**	FACTORY SHEET
Source	**Omega GF 620-3**	

Check the jewel count before you trust the calibre. At 27.90 mm by 5.00 mm and 19,800 A/h the 565 (24 jewels) is the same size as the 560 (17 jewels) and the 563 (17 jewels). They are told apart by the marking on the bridge, not by eye.

DOES OMEGA LIST THIS CALIBRE FOR YOUR CASE?

Case reference	**168.0022**	FACTORY SHEET
Calibre Omega lists for it	**564 (2012 case sheet)**	FACTORY SHEET
Calibre in the photographs	**565**	STAMPING
Match	**MISMATCH**	

Omega’s case sheet names the 564 for this case; the movement photographed is a 565. A Movement ID states the match or the mismatch and shows its sources. What that means for the watch is yours to weigh; the report does not grade condition or value.

AGE FROM THE SERIAL

Movement serial	**24,500,000**	STAMPING
Estimated year	**1966 to 1967**	COMMUNITY

THE PARTS THIS CALIBRE TAKES

`551.1033`	Lower bridge for automatic device	from the 551 family	FACTORY SHEET
`552.1031`	Upper bridge for automatic device	from the 552 family	FACTORY SHEET
`565.1003`	Train wheel bridge	565’s own	FACTORY SHEET

Read the part numbers, not just the calibre. Several parts carry the 551 and 552 prefix because the 565 was built on those calibres. That lineage is printed in the catalogue, and it is what tells you which replacement parts are factory-correct. The full report lists every part the calibre takes; this sample shows three.

HOW EACH LINE IS GRADED

FACTORY SHEET: printed in an Omega catalogue or technical guide held by Watch Breaker, volume cited. STAMPING: read from the metal in your photographs. COMMUNITY: established among collectors but not traceable to a factory page. UNVERIFIED: our reading, treat it as a lead.

A Movement ID is an identification from photographs. It is not an appraisal and carries no condition grade or value: the watch has not been in our hands. Watch Breaker is independent and is not affiliated with, endorsed by or connected to Omega SA or the Swatch Group. Omega is a trademark of Omega SA. Watch Breaker is a trading name of Union Boomer LLC (Wyoming, USA).
